SUBSTANCE OF INTERVIEW

Sir:

In accordance with 37 C.F.R. § 1.133(b), applicants are providing the following summary of the interview held on November 22, 2004:

At the interview, the applicants' attorney explained that the Japanese Takahashi reference appeared to disclose an embodiment having two windings per tooth, which were connected in series through a segment of the commutator

. It was further explained that this contrasted with the present invention, in which each terminal of each coil wound on a tooth is respectively connected to a different segment of the commutator.

Applicants' undersigned attorney may be reached in our New York Office by telephone at (212) 218-2100. All correspondence should continue to be directed to our address listed below.

Respectfully submitted,

A handwritten signature in cursive script, appearing to read "Robert H. Fischer", written over a horizontal line.

Robert H. Fischer  
Attorney for Applicants
